Simply smart. Simply LUXOR.
The LUXORliving smart home system.
LUXORliving controls your building. Simply safe.
The new LUXORliving smart home system.

LUXORliving is the intuitive smart home system from Theben, offering all-round home comfort. LUXORliving is the smart home system that is as easy to use as it is to program. Intelligent control for the homeowner, intuitive programming for the installer. Switching and dimming lights, regulating the room temperature and raising and lowering your blinds. Simply wonderful. Simply LUXORliving.
Those who know their stuff choose LUXORliving
The smart choice for homes, flats, bars, restaurants and offices.

Simple to extend.
Quick to install.
LUXORliving can grow.

Living comfort control makes houses and flats more comfortable and flexible, provides a pleasant working environment in offices and creates atmosphere in bars and restaurants. What’s more, living comfort control creates the optimum conditions for potential energy savings.
Super simple to operate.
Program cosiness.

LUXORliving – easy to use

Smart home system – that sounds complicated. That sounds like programming and spending lots of time working out how it all works. This is not the case with LUXORliving. LUXORliving is the smart home system that is (virtually) self-explanatory. It is easy to use and is fun to try out all the functions. And this isn’t just true for residents – the installer will also enjoy installing, programming and starting up the system.
Easy to set up – the installation interface for Windows.

LUXORplug is the simple setup software from Theben. Windows-based – speedy, safe, simple.
No prior knowledge necessary.

Easy to control – the user interface for smartphones and tablets.

LUXORplay is the app for convenient, safe and really easy operation of LUXORliving via smartphone or tablet (for Android and iOS).
Perfect night-time dimming. Flicker free and seamless.

Is there anything a child enjoys more than a good bedtime story to round off the day? With the day gradually turning to night and the tale imperceptibly becoming a dream. Perfectly dimmed lighting for the all important bedtime story. After stories of dragons and wizards little ones fall asleep more comfortably with a hint of light. With LUXORliving you can set the dimming level perfectly and precisely.

LUXORliving D4

Dimmers from Theben ensure that any level of brightness can be dimmed infinitely, while making sure that the light remains absolutely flicker-free. What’s more, LED lamps that never fully go out are also a thing of the past thanks to LUXORliving.
Infinite and flicker-free dimming

Have your lighting as bright or as dimmed as you like, to suit every situation. Whether radiantly bright for working in the kitchen, as a dimmed orientation light in the hallway or a sleeping aid for your little ones.
LUXORliving D4
Dimming actuators from Theben can be dimmed to the maximum level without delay and with just one click. Throughout the entire house.

LUXORliving S8
Switch actuators from Theben ensure that all lamps are switched on and your home is radiantly illuminated.

LUXORliving J4
Blind actuators from Theben ensure that any blinds that have been left down can be fully raised in an instant.
A comforting sense of security.

No panic with LUXORliving

It’s good to know that everyone is safe and sound at home. With the panic function, LUXORliving plays a huge role in creating this sense of security. If there is the slightest disturbance or unexplained noise outside the house. A single button press triggers the ‘Panic’ function simultaneous turning on all the lighting and raising all the blinds. This drives away anyone who shouldn’t be there. Even if it’s only the neighbour’s cat!
Imagine you're away. Yet your routine carries on.

Presence simulation with LUXORliving

Sometimes you simply have to close the doors and leave everything behind. So it’s great when everything continues in an orderly manner. Exactly as you are used to. Presence simulation in LUXORliving makes sure that the lights come on and the blinds go down at the usual time every evening. After all, not everyone needs to know that you’re not at home.
Clever presence simulation

When the occupants are at home, they use LUXORliving. When they’re not at home, LUXORliving is of use to them. The clever smart home system simulates presence, while the occupants enjoy their holidays worry free.

LUXORplay – just one click and you’re there
Control centre with LAN input.

Everything runs via the IP1 system control centre. It enables all devices to be switched off with one click. All you have to do is select which ones.
Everything off.
Perhaps the smartest function of LUXORliving.

Everything off

"Darling, just check again if everything is off!" – You must be familiar with the scenario: the car is packed, the family is waiting and you’re going through the entire house again to check that everything really is off. And when you’re done, you still have the awful feeling that you’ve forgotten something. That feeling is now a thing of the past. With LUXORliving, you can relax as you close the door behind you. Simply press "Control centre OFF" and everything will turn off. From the TV to the iron. Are you sure? Quite sure! The control centre OFF function in LUXORliving is simply practical.
Simply flexible when it comes to setup.

**LUXORliving – intuitive operation**

Select the devices, install, connect and program, simple. The visualisation is generated automatically. With LUXORplug, you can create the project file in an instant. Whether you are carrying out the installation at your office or directly on site – you have everything at your fingertips.

LUXORliving uses standard KNX communication, making it a secure investment that is fit for the future compared against proprietary systems. Updates ensure it is always at the cutting edge and the system is easy to extend if necessary. The show-stopper: LUXORliving has as much KNX as is needed and as little complexity as possible. That’s what makes LUXORliving so incredibly simple. For both the installer and the homeowner.

**Certified components**

LUXORliving is based on flexible BUS wiring, thanks to which lights, roller blinds or other functions can be assigned to the switch of your choice. BUS wiring also offers you the flexibility to adapt and extend the installation quickly and simply.

**Simple start-up**

You thought LUXOR was easy to install. LUXORliving is even easier. Easy to assemble, to wire and to program. No ETS, no licence, no prior knowledge. Just go with your intuition – speedy, safe, simple.

**Flexible BUS wiring**

LUXORliving is based on flexible BUS wiring, thanks to which lights, roller blinds or other functions can be assigned to the switch of your choice. BUS wiring also offers you the flexibility to adapt and extend the installation quickly and simply.
Simply super when it comes to installation.

Installation with LUXORliving

With LUXORliving, everything becomes much simpler. But some things, such as the installation process, stay as simple as you’ve come to expect from Theben and LUXOR.

Free push button selection

With many smart home systems the switch choice is limited. This is not the case with LUXORliving. The homeowner is free to choose, as our binary inputs and push button interfaces will work with any conventional switch ranges.

Removable system control centre

When security is a top priority, you simply can’t do without LUXORliving. The installer installs LUXORliving with a fixed default setting and simply takes the removable system control centre back out afterwards. External access is therefore completely ruled out. And if you want to make use of the convenient features of LUXORliving again later on, you just have to re-insert the system control centre and update it.

Individual scenarios

Lighting moods and blind positions can of course be programmed freely and can be called up with a command as required. This means that each individual can create the scenes of their choice.

### Starter packages

**LUXORliving “Drives”**
1x LUXORliving IP1 system control centre, 1x LUXORliving P640 power supply,
1x LUXORliving M140 weather station, 1x LUXORliving J8 blind actuator,
2x LUXORliving T4 push button interfaces

**LUXORliving “Lighting”**
1x LUXORliving IP1 system control centre, 1x LUXORliving P640 power supply,
1x LUXORliving S8 switch actuator, 1x LUXORliving D4 dimming actuator,
2x LUXORliving T4 push button interfaces

**LUXORliving “Drives & Lighting”**
1x LUXORliving IP1 system control centre, 1x LUXORliving P640 power supply,
1x LUXORliving M140 weather station, 1x LUXORliving S8 switch actuator, 1x LUXORliving D4 dimming actuator, 1x LUXORliving J8 blind actuator, 4x LUXORliving T4 push button interfaces
Ready to use.
In 6 simple steps.

1. Start project
First complete the basic information screen. Project name, address, installer and client details.

2. Create overview
Create the building, you can add the rooms to the relevant floors and assign individual names.

3. Integrate devices
Devices that have already been installed can be imported, identified and named automatically. Or you can create the device list manually offline.

4. Define functions
Use drag & drop to add functions to the devices in each room. This determines which devices communicate with each other.

5. Program functions
These functions can be transferred at any time. The project planning does not have to be completely finished to program the devices.

6. Prepare visualisation
The project file is transmitted to the system control centre. The functions are then extremely easy to operate and configure using the LUXORplay app.
